Module 2: Airway and Breathing: Facilitator Instructions for PowerPoint Presentation

1. Preparation
   a. Review learning objectives for this module
      i. Accurately determine whether or not a patient’s airway is patent and adequate.
      ii. Accurately assess the effectiveness of the patient’s breathing (oxygenation and ventilation).
      iii. Effectively perform maneuvers to relieve choking.
      iv. Effectively position the patient to open the airway (with and without possible cervical spine injury).
      v. Give supplemental oxygen.
      vi. Effectively provide bag mask ventilation with and without airway adjuncts.
   b. Review Participant manual course content for this module
   c. Review PowerPoint presentation
   d. Check equipment

2. Equipment
   a. EITHER
      i. Laptop
      ii. LCD projector
   b. OR
      i. Laminated cards
   c. Infant AND child manikins for choking maneuvers, airway positioning, and bag-mask ventilation demonstrations
   d. Bag-valve-mask with correct size mask (infant or child) for bag-mask ventilation demonstration

3. General principles
   a. If the course is being given as separate modules over several weeks (rather than as a continuous course over several days), begin with the review slides from the previous module.
   b. Review learning objectives carefully.
   c. Make the presentation interactive.
   d. Leave time for questions.
